IN-WALL & IN-CEILING SPEAKERS

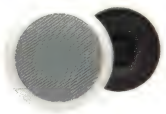

More than any other component, speakers define the sound of an audio system. In-wall and in-ceiling speakers have made tremendous strides in recent years to the point of competing with their cabinet-style counterparts. Thus, many are turning to in-wall/ceiling solutions to maximize their living space. Extremely popular with interior designers and decorators, they offer a clean, minimalist look and near-invisible presence, thanks to their camouflage grilles. When installing your next system, you may want to consider the excellent products listed below for a heard-but-not-seen experience in a home that truly emanates music.

polkaudio SurroundBar6000

Instant Home Theater System

This makes it the ultimate single-speaker surround sound system for wafer-thin flat-panel TVs, and includes on-board digital processing and a separate compact wireless subwoofer you can put anywhere for enhanced bass effects.

- Less than 2" deep, the SurroundBar 6000 complements new slimmer flat-panel TVs. Its lightweight and easy-to-mount on the wall or on your shelf. All the hardware you need is included, too. High gloss details match today's TV styling.

In addition, universal port tuning in the SurroundBar itself guarantees ideal mid-bass response and smooth subwoofer blending whether it's mounted on a shelf or on the wall.
- Digital SDA Surround uses complex algorithms to reproduce multiple audio channels without requiring multiple speakers. Even without any complex set up or menu calibrations, and no additional speakers, your ear actually hears sounds directed to audio channel locations (L, R, rear).
- With on-board Dolby Digital, just connect your TV, DVD or Blu-Ray player, or gaming console directly via optical or analog inputs and experience the magic of single-speaker surround sound.
- SmartBar™ programming enables the SurroundBar 6000 to easily learn volume up/down and mute from your existing TV remote control. You'll use only one remote for the SurroundBar and your TV.

DIGITAL LIVING

There's no doubt we live in the digital era. Music, photography, video — it is all digital, and it is at our fingertips. Digital technology has transformed the way we work, play and communicate. From the pictures we take with our digital cameras, to the music we listen to on our digital music players, and all the information stored on our computers, PDAs, and mobile phones, everything is based on some type of digital file format.

Whether we are traveling by train, plane, automobile, or boat; while studying, jogging, working out—and even swimming—we obviously want our videos, music, movies, TV programs, and podcasts with us. The industry overall has made great progress toward developing innovative products and services that are helping make digital living a reality for consumers.

SONY

S-Frame Digital Photo Frames

Sony's S-Frames offer convenient features such as slide show variations, an auto orientation sensor to detect if they have been placed horizontally or vertically, clock and calendar views, and index modes so you can preview several photos at once. You can also conserve energy by using the auto power on/off setting to program when you want the frame to turn on in the morning and off at night. Functions of the digital photo frame can be managed using the included remote controller.

Digital images can be loaded onto the internal memory of the digital photo frames from several types of media cards, including Memory Stick PRO, Memory Stick PRO Duo, SD/SDHC and MMC memory cards. Photos can also be transferred to the frames from a computer via a USB cable (optional). All models support JPEG and RAW (thumbnail preview) image file formats.

- Whether you choose to display your frame vertically or horizontally, the Auto Orientation sensor will rotate your photos into portrait or landscape format — automatically.
- The frames makes a beautiful — and practical — addition to your living room, office or kitchen. Clock and calendar functions show the current date or time right along with your pictures.
- Display your photos as single images, or as engaging slideshows with your choice of creative transition effects. The thumbnail index view lets you quickly scroll through all your shots to find just the ones you're looking for.

FinePix REAL 3D W3

3D Digital Camera with 3D HD Video

Equipped with dual Fujinon 3x optical zoom lenses (35-105mm), two 10-megapixel sensors and two shutters that work like your eyes, the FinePix REAL 3D W3 captures true 3D by simultaneously capturing two images from two angles with the press of a button. After capturing an image (or video in 3-D), an internal processor merges these two images into one, which can be seen on the back of the camera in a stunning display—no special glasses required. If you want to see photos and videos in 3-D format other than on the camera's 3.5" display, you can view them on a 3D-ready TV or 3D-ready computer while wearing special glasses.

Finepix X100

The FinePix X100 is a high precision digital compact camera that combines modern technology with a traditional camera design to deliver the ultimate in image quality. Featuring a 12.3 megapixel APS-C CMOS sensor, Fujinon 23mm f/2 lens, a 2.8" 460K LCD, and the world's first Hybrid Viewfinder, the FinePix X100 captures exceptionally high quality images.

- When shooting HD movies, the large f/2.0 aperture lets users create a soft out-of-focus image
- Hybrid Viewfinder combines the window-type "bright frame" optical viewfinder with the electronic viewfinder system. Can show both the shooting frame and a variety of electronic shooting data.
- Users can instantly switch between optical and electronic viewfinder modes for expanded freedom.
- With the built-in Motion Panorama function, it is easy to capture 180° and 120° panoramic photos.
- Four types of bracketing functions: AE, ISO, Dynamic Range and Film Simulation. One click of the shutter captures 3 bracketed images of the scene so you know you've captured the moment.

For ultra-wide angle photography with the 40D, 30D, 20D and Digital Rebel Cameras, look no further than Canon's smooth and solid 10-22mm EF-S. Designed exclusively for digital SLRs, it has the same angle of coverage as a 16-35mm lens (in 35mm format). It is in fact, the widest lens available from Canon for these cameras. A Super UD and 3 aspherical lens elements assure excellent image quality while the USM autofocusing is fast and silent.

EF-S 17-55mm f/2.8 IS USM

The large circular aperture produces a shallow depth-of-field, creating background blur that draws attention to the photographic subject. The lens construction includes UD and aspherical elements, plus Image Stabilizer lens groups that shift to compensate for camera movement, ensuring clear, crisp images, even in dim light. With a ring-type USM, inner focusing & AF algorithms, this lens achieves autofocus quickly and quietly.

100mm f/2.8 EF USM Macro Lens

The 100mm f/2.8 macro lens will focus over the full range from infinity down to life size (1:1 reproduction ratio). A high-performance ring-type ultrasonic motor provides fast and silent operation throughout its focus range. It also allows full-time manual focusing. An advanced optical formula with a three-group floating element system provides exceptional close-up performance, and a wide manual focusing ring offers smooth action and full-time manual focus override, even in the AF mode.

EF 24-70mm f/2.8L USM

This lens improves on the previous L-series 28-70 f/2.8 lens with something even better. The range has been extended to cover an ultra-wide-angle 24mm, which makes it ideal for digital as well as film shooters, and the optics are even better than before with two aspherical elements and a totally new UD glass element. It's now sealed and gasketed against dust and moisture, and an improved processing unit makes the AF faster than ever.

70-200mm f/2.8L IS USM

Incorporating Canon's second generation two-stage Image Stabilization technology, this telephoto zoom responds in as little as 0.5 seconds, while providing up to three stops of correction for camera shake. Its AF system has been refined for better response time and tracking speed. And even the new 8-blade circular aperture offers a more pleasing out-of-focus image. Constructed to pro standards, this fast zoom is also highly resistant to dust and moisture.

LENS TYPES

D-Type NIKKOR lenses relay subject-to-camera distance information to AF Nikon camera bodies. This then makes possible advances like 3D Matrix Metering and 3D Multi-Sensor Balanced Fill-Flash.

DX NIKKOR are c lenses ompact and lightweight, featuring a smaller image circle specially designed and optimized for Nikon digital SLR cameras.

AF-S NIKKOR lenses feature Nikon's Silent Wave Motor which converts "travelling waves" into rotational energy to focus the optics. This enables smooth autofocusing that's extremely accurate and super quiet.

G-Type NIKKOR are compact and lightweight lenses featuring a smaller image circle are specially designed and optimized for Nikon digital SLR cameras.

OLYMPUS

E-P2 — 12.3 Mega Pixels

Clad in ergonomically-designed stainless-steel black body, the E-P2 takes many design queues from the Olympus Pen F, a popular half-frame SLR that made its initial debut in 1959. But unlike the original, the E-P2 produces vividly-detailed digital stills and HD video with stereo, both of which can be enhanced using advanced in-camera retouching and audio dubbing tools. The included VF-2 live-finder is a detachable electronic viewfinder that easily slides onto the camera's accessory port and hot shoe, providing 1.15x magnification, a 100% field of view with amazing resolution, brightness and contrast. The VF-2 rotates up to 90° to enable photographers to look down into it, which is useful when shooting subjects from challenging angles.

E-PL1 — 12 Mega Pixels

The 12-megapixel E-PL1 features a sensor 8x larger than the ones in average point and shoot cameras. The sensor combines with the TruePic V Image Processor to deliver excellent dynamic range, accurate color and reduced noise, all the way up to ISO 3200. With state-of-the art noise reduction and 3 in-body image stabilization modes, users will realize clear images with all compatible lenses under most lighting conditions. iAuto mode automatically identifies the scene you're shooting (portrait, landscape, night portrait, macro, or sport) and adjusts settings to optimize results. While in iAuto, engage Live Guide control which lets you compose your picture, manipulate the image with various in camera effects like softening backgrounds before taking the photo.

E-PL2 — 12 Mega Pixels

Continuing the PEN family's legacy of simple design, intuitive interface and DSLR image quality, the E-PL2 expands creative potential with Live Guide II, in-camera creative features, auxiliary lenses, a close-up spotlight accessory and a PENPal Bluetooth accessory. The camera comes with an M.Zuiko Digital ED 14-42mm f/3.5-5.6L (28-84mm equivalent) zoom lens with high-speed, silent autofocus during still shooting and high definition (HD) video capture. It has a 3" 460,000 dot LCD sensitivity up to ISO 6400. Choose from different art filter looks or overlay different art filters to create something new, with full manual control.

E-5 — 12.3 Mega Pixels

The E-5 camera achieves the highest image quality by pairing a 12.3 megapixel High-Speed Live MOS Sensor with a TruePic V+ image processing engine that boasts new "Fine Detail Processing" technology for greater detail in the photograph. Optimized to maximize the performance of the Zuiko Digital Lenses, Fine Detail Processing takes digital photography to the next level. A 3.0-inch dual axis swivel HyperCrystal LCD with 920,000 dots makes it easy to frame High Definition (HD) videos and still images at any angle from low to high and side to side to ensure accurate composition. Ten in-camera Art Filters including new Dramatic Tone can be used in all shooting modes, program auto, shutter and aperture priority and manual modes and movies with expanded control. Camera's sealed lightweight "thixomold" magnesium alloy chassis is completely splashproof and dustproof

Lumix DMC-G2

The 12.1-megapixel DMC-G2 features 3" flip-out swivel touch-screen LCD monitor (rotates 180° horizontally and 270° vertically), Face Detection, and 720p HD video in M-JPEG or AVCHD Lite formats. An HDMI output allows playback of stills and video on a widescreen HDTV.

- Electronic Live View Finder (1,440,000-dots), plus a built-in eye sensor detects when a user is nearing the viewfinder and a switches off the LCD.
- Live View Finder has a large 1.4x (0.7x 35mm equivalent) magnification. In manual focus, the frame in the viewfinder or LCD will enlarge by 5x or 10x.
- Start recording movies while shooting photos, without having to make any extra settings.
- Motion Picture P mode lets you set the degree of soft focusing in the background to capture rich, emotionally expressive HD movie images.

Lumix DMC-GH2

The 16.05-megapixel DMC-GH2 steps up from the DMC-G2 with Full HD 1920 x 1080 video at 24 or 60 fps in H.264 AVCHD format. Continuous AF can be used, while high-quality sound with Dolby Digital Stereo Creator and other creative options, including manual settings, make it even more versatile. Variable Movie mode lets you choose the frame rate, from 80% to 300%. There are a variety of color modes (including 3 different B&W settings), and you can even shoot a high-resolution 14MP photo while recording video. When shooting stills, the Live MOS sensor renders images with minimal noise even when using high ISO. Multi-aspect ratio function allows photos at 4:3, 3:2 or 16:9, all with the same angle of view. Incorporating iA (Intelligent Auto) mode with Face Recognition function, the camera will prioritize focus and exposure on a familiar face as it appears in the frame.

The 14.2MP DSLR-A560 and 16.2MP DSLR-A580 step up from the A390 with Exmor APS HD CMOS sensor to ensure crisp low-noise images with fine detail and vibrant colors. BIONZ image processor with color-noise reduction achieves low noise up to ISO 12800, without sacrificing fine detail. Multi-frame NR boosts effective sensitivity up to ISO 25600.

- Quick AF Live View uses two sensors to maintain the same focusing speed as with the optical viewfinder. Focus Check enables critical framing and magnification for setting precise focus in macro and tripod shooting.
- 3-inch high resolution (921,600 pixels) Xtra Fine LCD screen tilts 90° degrees up or down.

NEX-3 • NEX-5

The 14.2 megapixel NEX-3 and NEX-5 deliver full DSLR performance, Full HD Video, Sweep Panorama, APS-C sensor and low-light capability in an unprecedented compact design—small enough to slip into a small purse or jacket pocket. "Mirrorless" construction reduces the thickness of both camera bodies to just about an inch at their slimmest point (excluding grip and mount portions). This also makes them the world's first interchangeable lens cameras with an APS-C sensor to offer continuous auofocus and automatic exposure while recording video. The NEX-3 shoots 720p HD video as compact MP4 files. The NEX-5 camera offers Full HD (1920 x 1080i) video in AVCHD format. Both include built-in stereo microphones for high-quality audio recording. Images and camera settings are displayed on the 3-inch Xtra Fine (921,000 dots) LCD that tilts up or down.

SLT-A33 • SLT-A55V

Incorporating Translucent Mirror Technology, the 14.2 megapixel SLT-A33 and 16.2 megapixel SLT-A55V achieve the highest-level of auto focus speed for both still image and movie shooting. By doing away the motion of raising and lowering the mirror, the cameras can continuously and quickly focus (with TTL phase-detection) while shooting stills and recording video—even in full HD, allowing desired moments to be captured in tack sharp focus. It also allows them to shoot continuously at up to 7 fps (SLT-A33) or 10 fps (SLT-A55V). The absence of the moving mirror mechanism also makes them much more compact than traditional DSLR cameras. Otherwise the same, the SLT-A55V adds a built-in GPS.

- They record Full HD 1080/60i Full HD AVCHD format and have an HDMI output.
- Ultra-high ISO sensitivity (ISO 100 - 12,800) plus Auto HDR and Multi frame NR
- Full-time Live View using either the viewfinder or fully articulated 3-inch Xtra Fine (921,600 pixel) LCD with TruBlack™ technology with 100% percent coverage.
- The Tru-Finder eye-level viewfinder (1.15 million dots) provides 100% coverage and 1.1x magnification for easy and natural framing.
- Compatible with all A-mount lenses, user scan choose from macro to telephoto lenses to achieve their desired artistic effect.

Arctic Butterfly

Sensor Brushes

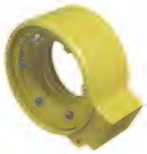

The Arctic Butterfly 724 (Brite) features a bright LED that illuminates the sensor while in operation, making it to see the dust. The DC rotary engine generates an optimal centrifugal force that enables speedy dust rejection while increasing the charge enhancement of the fibers. Combining nano-coating technology for charge enhancements, super thin fibers for maximum lift capability and rotary motion for cleaning/charging (without the use of canned air) makes the Arctic Butterfly® 724 (Brite) a superb sensor cleaning tool. Can be safely used on ITO (Indium Tin Oxide) coated sensor and DLSR's with built in sensor cleaning systems. The Arctic Butterfly SL700 has a lower spinning speed and does not offer the convenience of a detachable brush.

Lens Hoods

Pearstone Lens Hoods are specifically designed for use with the most popluar lenses from Canon, Nikon and Hasselblad. Lens hoods are primarily designed to prevent unwanted stray light from entering the lens, by extending and shading the end of the lens. A dedicated lens hood is designed to perfectly match the specific focal length of the lens it was designed for. In addition, since the end of the lens is extended, you also get the added benefit of some extra protection from accidental impact.

MODEL TYPES

DG Models

Optimized for Digital SLR's

These are large aperture, wide angle lenses with short minimum focusing distances and an abundance of peripheral illumination. While they are ideal lenses for digital SLR cameras, they are also suitable for traditional 35mm SLR's.

DC Models

For Digital SLR's Only

These lenses feature an image circle matched to the small sensor found in digital SLR cameras. This method results in a lens ideally suited to digital reproduction with the added bonus of reduced weight.

MODEL FEATURES

HSM - HyperSonic Motor. Enables virtually silent, highly-responsive auto and manual focusing, as well as manual-focus-only override.

ASP - Aspherical Lens. The aspherical lens complex allows freedom of design, improved performance, a reduced number of component lenses and a compact size.

EX - EX Lens. The exterior of this lens is EX-finished to denote the superior build and optical quality, and to enhance its appearance.

OS Function - Optical Stabilizer. This function utilizes a built-in mechanism that compensates for camera shake. It dramatically expands photographic possibilities by alleviating camera movement when shooting by hand-held camera.

APO - APO Lens. In order to attain the highest quality images, the APO lens has

been made using special low-dispersion (SLD) glass and is designed to minimize color aberration.

IF - Inner Focusing. To ensure stability in focusing, this lens moves the inner lens group or groups without changing the lens' physical length.

RF - Rear Focusing. This lens is equipped with a system that moves the rear lens group for high-speed, silent focusing.

RFS - Rear Filter Slot. This lens has a rear slip-in gelatin filter slot.

HASSELBLAD

H4D-40 40-Megapixel Medium Format DSLR Camera

Delivers unsurpassed image quality via powerful features and precision optics. mamiya DM Series

DSLR Camera Systems

In large sensor digital photography, price and performance are usually at opposite ends of the digital spectrum. Normally you have to pay more — a lot more — for better quality, performance and features; certainly for the latest technology. The DM22 and DM28 totally change that way of thinking. There is no substitute for top-quality digital files. With the DM22 and DM28 you can be confident premium quality 22- and 28-megapixel sensors producing true 16-bit/channel RAW files will result in richly detailed images that leave a vibrant and lasting impression.

B+W

The industry-standard for demanding professionals and amateur photographers for creative imaging with optimal quality. Choose from correction and effect filters for color and B&W photography; Käsemann polarizing filters; close-up lenses; special-effect- and trick lenses; filters with SLIM mounts for vignette-free exposures with wide-angle zoom- and fixed focal length lenses.

B+W uses the very best glass and filter mounts, and machines them with CNC-controlled fabrication machines to make sure that the filters perform their functions optimally without jeopardizing image quality.

Most other filter manufacturers start with ordinary window glass that has been poured in thin sheets and cooled quickly, introducing internal flaws. B+W starts with a cylinder of Schott German optical glass from which the filters are diamond cut, precision ground, and then polished to ensure flatness on both surfaces and uniform thickness throughout. Every B+W filter is interferometrically tested for plane parallelism. This process is used routinely by the world's leading lens makers, but only rarely by filter manufacturers.

HOYA

Wouldn't you rather spend your time attaching the right filter than retouching every photo? Attaching the right filter can replace the need to retouch each digital photo you take.Using filters allows you to spend more time taking photos and less time in front of the computer!

Digital camera CCD or CMOS sensors are highly susceptible to reflections - this stray light can ruin your photographs! Don't risk your valuable photos by using bare-glass filters. Now try a HOYA Digital Multi-Coated filter and see how the benefit of substantially reduced reflections can improve your image. Reduced internal reflections mean a clearer image with greater contrast

SQUARE OR RECTANGULAR FILTERS require the use of a special filter holder, or matte box. They offer the additional benefit of sliding adjustability, for effects that must be precisely aligned within the range of graded filters. In all cases, it is advisable to use a mounting system that offers sturdy support and easy manipulation. The use of a lens shade will minimize the effect of stray off-axis reflections.

cokin

Cokin universal filter holder system allows you to use 1 of 160 different filters on many different-sized lenses. Works with all lenses of SLR cameras (35mm or digital), medium and large format cameras, video/ broadcast cameras & slide projectors. The filter holder is the key to the whole Cokin Creative Filter System. It is attached to the lens by the adapter ring & takes specially designed round or square filters.

There are 3 different Series in the COKIN System: "A" Series for lens diameters from 36mm to 62mm; "P" Series for lens diameters from 48mm to 82mm; "Z-PRO" Series for lens diameters from 49mm to 96mm

VORTEX Escape

Collapsing to under 2' and extending to 6', the 2.4 lb. Escape is ideal for sport optics use. The head has adjustable tension control, so that you can follow subjects with the head unlocked and not have to worry about the head 'dumping' to gravity if you should take your hands away for a moment.

The Escape's quick release system is an open-channel type, meaning that the relationship of the plate to the clamp is horizontally variable. This makes it possible to adjust the fore/aft position of your optics so that the weight is perfectly positioned over the legset, allowing you to carry a little less weight. Load capacity is 14 lbs,.

PIXMA Pro9000 MKII • PIXMA Pro9500 MKII

13 x 19" Professional Inkjet Photo Printers

Affordable, professional wide-format printers, the 8-color PIXMA Pro9000 MKII and 10-color PIXMA Pro9500 MKII produce brilliant, gallery-quality prints up to 13 x 19" on a variety of specialty media and fine art papers. The Pro9000 MKII uses long-lasting dye-based inks, the Pro9500 MKII utilizes long-lasting pigment-based inks, bringing all the benefits of the commercial print studio into your workspace. They feature Canon's high-performance FINE print head with auto-self alignment mechanism, integrated wheels and automatic sheet feeder. They offer versatile media handling with support for fine art paper up to 13 x 19" with two separate paper paths, including front feeder for heavyweight paper types. Last, they feature Canon-to-Canon Direct Printing, professional CD printing, and come with professionally-oriented software to enhance your creativity and productivity.

- Ambient Light Correction technology helps reduce the perceived color difference caused by different light conditions between printing and viewing or display environments. Compatible with Windows Vista OS, Ambient Light Correction allows users to optimize print color for the lighting conditions where the final print will be shown. Through the software, users can adjust color to various levels of lighting conditions from daylight at 6500K to a warm white fluorescent lamp at 3000K for optimal viewing.
- They come bundled with Canon's proprietary Easy-PhotoPrint Pro software and Adobe PhotoShop Elements. Plug-in for AdobePhotoShop CS, CS2, CS3, or PhotoShop Elements 6 along with Canon Digital Photo Pro (DPP) software, Easy-PhotoPrint Pro permits one-click image transfer, simple setting controls for color management and allows users to configure printer settings once for images on multiple sheets. It also facilitates the printing of RAW image files (as a high quality TIFF or JPEG) without having to save directly from applications, like DPP.

Pro9000 MKII (8-Color)

The Pro9000 MKII's dye-based inks produce bright, highly saturated colors on a wide range of media, from matte to high gloss. Light reflects evenly off the printed surface, giving professionals an exceptionally wide color gamut to work with and allows prints to retain a life-like sense of depth. Eight separate ink channels offer a level of color fidelity rivaling that of positive photo film. The red and green inks increase saturation by 60% and 30% respectively compared to 6-ink printers. Subtle details – particularly in areas of low chromaticity – are reproduced with proof-standard accuracy. Unique ChromaLife100 system achieves beautiful prints with enhanced longevity– resisting fading for up to 100 years.

Pro9000 MKII *(CAPP9000M2)* **449.00**

Pro9500 MKII (10-Color)

Uses Canon's Lucia inks – high density pigment inks that offer exceptional print quality on both photographic and fine art papers, and on finishes ranging from matte to semi-gloss. They deliver image permanence of up to 100 years with color prints and 200 years with monochrome output. Three monochrome inks and seven color inks provide photographers with outstanding monochrome and color reproduction in a single unit. The addition of red and green inks extends the color gamut for true-to- life portraits, landscapes and fine art prints. The dedicated gray ink reduces metamerism and ensures that prints are free of the color shift that can appear with conventional CMYK-generated output.

Stylus Photo R3000 Wide-Format Photo Printer

Stepping up from the R2880, the R3000's high-performance print head places variable sized droplets as small as 2 picoliters for intricate detail at resolutions up to 5760 x 1440 optimized dpi. Hahnemühle
FINEART

Inkjet Paper

The Hahnemuhle paper mill has been producing quality mould made artists papers for over 400 years. Since its founding they have developed a tradition of excellence in art materials that have now been brought to the digital age. The result is the Hahnemuhle collection of Digital Fine Art papers. Designed for discerning users, these grades of Digital Fine Art paper can be used to create limited editions, giclees, original digital art, traditional output, photographic and historic photographs on a choice of paper textures, multiple colors and a huge variety of sheet sizes and weights. These are available in cut sheet sizes of A4, A3, A2 and are compatible with all inkjet printers up to a printed resolution of 1440 dpi, while printers that feed flat from the bottom and bending the paper up round only being recommended up to 210 gsm. The Hahnemuhle papers work equally well with both dye and pigmented based inks on a wide variety of printers providing a color intensity and crispness not possible with non-coated art papers. The Hahnemuhle collection is manufactured in the traditional mould-made and fourdrinier techniques that artists value for its unique rich look, feel and texture. No longer does the digital artist have to compromise on paper quality when producing or reproducing their work digitally. Surface coating in combination with the traditional paper base and the right inks will produce sharp, high resolution output with the warmth and quality of the hand generated artwork. In many cases it is difficult to identify the original with the copy.

INNOVA

Innova's highly acclaimed award winning FibaPrint range is designed as a digital solution to the traditional Fibre based baryta papers used in the conventional darkroom. A special Micro porous gloss coating was developed specifically for photographic reproduction and high quality fine art print applications. These coating range from a semi-matte to an ultra gloss finish, with the texture and feel of the art paper base giving it a quality as close to any traditional Fibre photo paper out there. The acid inhibiting crystal layer technology makes it the perfect digital FibaPrint alternative. They have an extremely large colour gamut and D-max rating of up to 2.7.

MUSEO

Museo (pronounced Moo-zay-o) is the brand name given to the family of digital fine art papers manufactured to archival standards (Library of Congress, ISO) with all products being 100% cotton, internally buffered (to prevent long term environmental acidification), and containing no optical brighteners (which fade over time). Museo is designed for professional, semi-professional, and prosumer photographers and artists who produce digital originals or reproductions using inkjet technology.

RotaTrim Technical (Manual) & Powertech (Electrical) Cutters

The Technical/Powertech range use a unique, self adjusting triple roller cutting head to effortlessly slice through almost any flexible sheet, including thin films and foils, up to 4mm thick. The Technical (manual) and Powertech machines are ideal for display/exhibition applications, and are available in extended ranges with up to a massive 99" cut length. The Powertech models have the cutting head electrically driven by a steel reinforced belt, via a foot operated pneumatic switch, thus leaving both hands free for speedy repositioning and faster throughput. Each Powertech machine is supplied with a comprehensive operating and servicing manual.

- Stainless steel 1½" square guide rail and all metal construction eliminates distortion.
- Self sharpening steel cutting wheel and counterblade.
- Transparent clampstrip combines with rubber gripper for firm positive clamping.
- Two way cutting option by removing C.C. Plate.
- Longer machines (1550 upwards) supplied with unique extension rods which effectively double baseboard depth to 700mm – perfect for pop-ups.

PAL Camcorders Explained: In the U.S., the TV color system is known as NTSC, which uses 525 scan lines at 30 frames per second. But there are two other television standards, called PAL and SECAM, used in the rest of the world. Unlike NTSC, PAL uses 625 scan lines at 25 frames per second. So, while camcorders can record video anywhere in the world, it's where that video is played back that makes a difference. PAL camcorders are designed to play back in countries that support the PAL color system—such as Europe, China, the Middle East, and South Africa. This means that these camcorders—with their different signals and frame rates—do not play back on American televisions. There are no multi-standard camcorders; they are either NTSC or PAL. Variations to these standards also exist, such as PAL-B, PAL-I (United Kingdom), SECAM-D (China), and SECAM-L (France).

Convert the output from any camera, including prosumer level, to SD-SDI for connection to professional equipment. Converts component, composite, and S-video. Balanced XLR and unbalanced RCA audio inputs. Also has an RS-232 port.

#DADAC7.....**413.00**

DAC-8 HD/SD-SDI to HDMI Converter

Makes it easy to output uncompressed SDI video and audio to a projector or HDTV. Two BNC connectors receive the HD/SD-SDI video, while two unbalanced RCA connectors handle the audio – all of which is converted to HDMI. Use SDI coaxial cable to transmit high-quality HD video over distances up to 300'. Combined with the DAC-9, you have an affordable solution for distributing HDMI signal over long distances, without quality compromises.

#DADAC8.....**384.00**

DAC-9 HDMI to SDI Converter

Use small DV/HDV cameras with HDMI output that are available for live production and convert their output to SD-SDI or HD-SDI. This enables signals from DV or HDV cameras to be used with SDI switchers. In cable runs of 100-200 feet there is a cost advantage in using a long SDI or HD-SDI cable, rather than a long HDMI cable. Self-adhesive straps make it easy to attach to a tripod leg.

#DADAC9.....**384.00**

DAC-50 HD/SD-SDI Signal Converter

HD/SD-SDI to Y:U:V component and composite video signal converter with built in up/down scaling. Convert from a HD-SDI (1080i, 720p) or SD-SDI signals to HD (1080i,720p) or SD (480i/50i) Y:U:V component or composite video signal. Can also cross convert from 1080i to 720p.

#DADAC50.....**528.00**

Shotgun Mic Kits

(Basic & Deluxe)

B&H shotgun microphone kits give you all the gear you need to get the job done. We have put together several well thought out combinations that center around some of our most popular and effective shotgun models. Our basic level shotguns offer great performance for the dollar, and feature lightweight yet durable construction. Deluxe kit mics are characterized by the increased rich and open sound quality you might expect from an upper-level model, with even higher component standards. Because of their sensitivity to wind and handling noise, each kit contains a camera-mountable suspension shock mount to provide isolation from inadvertent shocks, and a high-quality wind cover to provide effective wind protection on outdoor shoots. Also provided is a pistol grip, which is great for close handheld applications, light packing, or for those times where a pole is just too obtrusive. For those occasions where optimal reach is desired, basic kits provide easy-handling aluminum boompoles, while deluxe kits come with even lighter carbon fiber models. 20' and 1.5' cables round out the systems with the deluxe kit 1.5' cables being coiled.

Wireless Eng Kits

(Basic & Deluxe)

A dependable wireless microphone system is a must-have in any Audio For Video sound kit. The ability to capture your subject without the use of cumbersome cables provides freedom of movement, and at times may be the only alternative you may have in a given situation. Our Wireless ENG Kits are designed to get you working right away while leaving room to expand as your needs grow. We start with some of our most popular multi-channel UHF wireless lavalier systems, that have proven to be solid performers in the areas of sound quality and reliability. When a lavalier is a less than optimum option, you can make use of the provided plug-in transmitter to connect to a shotgun, handheld, or other microphone as well as a line level signal source in some cases. A professional omnidirectional handheld mic is also included, along with a waterproof carrying case, packed with foam inserts. Deluxe kits feature the added benefit of an upgraded broadcast quality lavalier microphone, which is the ultimate way to improve the sound quality of a standard system.

Wireless Eng Dual Kits

(Basic & Deluxe)

For those occasions where one mic may not be enough, B&H offers both basic and deluxe Dual Wireless ENG microphone kits. These make it easier than ever to conduct two-person interviews or cover multiple subjects by simply reconfiguring the supplied system components. At the heart of each kit is either a combination of two complete wireless lavalier systems with independent receivers, or a system that will include a single dual-channel receiver. A single dual-channel receiver can streamline your setup by offering one consolidated receiver package for easy mounting. Two separate receivers allow placement in different locations, like on two different cameras for instance. These kits also include a professional omnidirectional handheld microphone and plug-in transmitter for even more versatility, as well a waterproof carrying case packed with foam inserts. The deluxe kits feature upgraded lavalier microphones for improved sonic performance.

Mixer Kits

(Basic & Deluxe)

If you have started to make use of several microphones or audio sources on your shoots, acquiring a portable mixer could be your next wise investment. A mixer can bring new parameters of control to your productions by allowing you to match and monitor your levels in a more precise manner. You will also be able to increase the total number of inputs that simultaneously feed your camera or recording device, which greatly expands your coverage by combining a variety of sound sources. Improved metering, XLR connections, and phantom power are but a few of the advantages that a mixer can provide, with some models even offering selectable limiters to guard against sudden volume overloads. Get started with a B&H Basic Mixer Kit, which will give you a compact portable field mixer along with a pair of professional headphones to properly monitor all of you signals and help you keep things trimmed. If you are looking for a more advanced alternative, our Deluxe Mixer Kits will come with a professional production mixer bag and wearable harness, as well as a breakaway cable for a direct link to the camera or recorder.

Shotgun Microphones

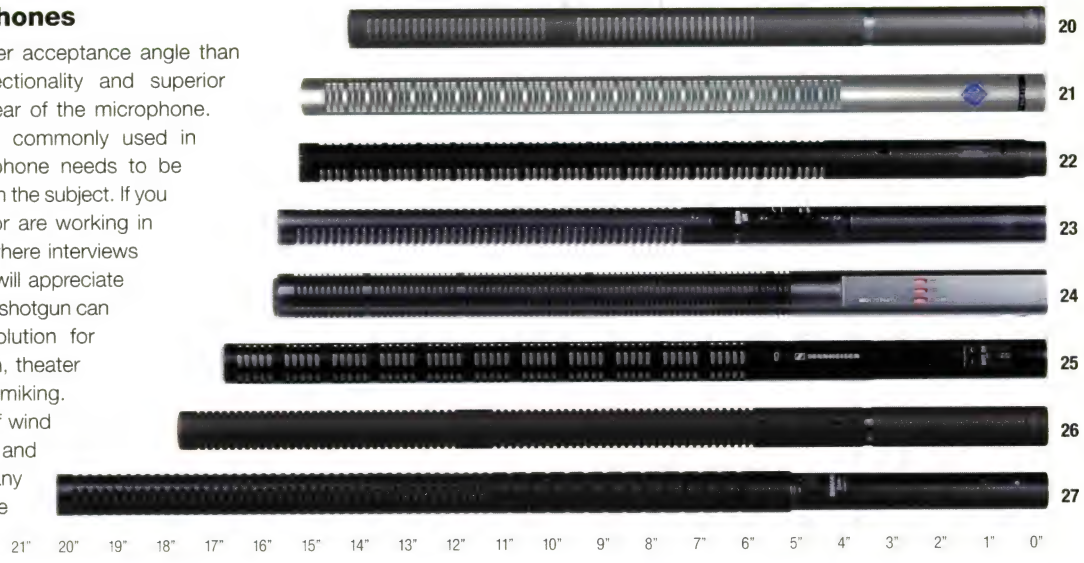

are characterized by a long, narrow tube design, not unlike the barrel of a shotgun. These highly directional microphones are commonly used for ENG, broadcast, and location sound applications. They provide a narrower angle of acceptance that solates the subject's sound from unwanted "off-axis" ambient sound. Shotguns are frequently mounted on boompoles (for operation by a boom operator) or directly onto a camera in more basic setups. B&H carries an extensive line of wind protection, mounting hardware, and accessories to accommodate any type shotgun microphone configuration.

Long Shotgun Microphones

are characterized by a narrower acceptance angle than standard shotguns, high directionality and superior rejection from the sides and rear of the microphone. These types of shotguns are commonly used in applications where the microphone needs to be located at a greater distance from the subject. If you are filming wider angle shots or are working in news or broadcast situations where interviews are done on the run, then you will appreciate the extra sensitivity that a longer shotgun can provide. They are a great solution for location film and TV production, theater sound reinforcement and spot miking. B&H carries an extensive line of wind protection, mounting hardware, and accessories to accommodate any type of long shotgun microphone configuration.

Boompoles

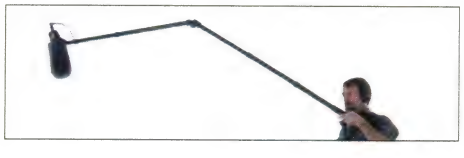

Boompoles are an essential tool in any sound person's kit. With the chart below you can easily compare important features such as length, weight, and build material. Aluminum poles are lightweight, strong, and offer a great value for their price. Poles made of carbon fiber offer a high strength to weight ratio, and therefore represent the ultimate in smooth superlight handling performance. Poles with an internal cable will both streamline your rig and simplify your setup and breakdown. Choose from bottom or side exit cable connections to best suit your needs.

IMAGE-STABILIZER BINOCULARS

Image-stabilized binoculars have a mechanism for decreasing the apparent motion of the view due to binocular movement. Image stabilization technology ensures instant adjustment of the image to compensate for motion. Higher-power binoculars bring the image closer, but the image shift is greater with even minimal movement of your hands.

DIGISCOPING

Photography with a Spotting Scope

Most spotting scopes can be attached to a digital camera and used as a telephoto lens. The best photographic results will be achieved using apochromatic spotting scopes which use HD/ED glass or fluorite. With SLR cameras, the eyepiece is removed from the scope and replaced with a special photo adapter. This photo adapter may contain lens elements specially designed for photography. Digiscoping usually refers to using a "point and shoot" digital camera and photographing through the eyepiece of the spotting scope. You can either hold the camera up to the eyepiece or purchase a special adapter.

B&H offers ground service into Canada via Purolator. To expedite the entry and customs process, B&H consolidates all Purolator shipments daily into Canada. When shipping with Purolator, B&H is the Importer of Record as a Non-Residential Importer (NRI) into Canada. Duties and Taxes are therefore the responsibility of, and are paid by, B&H Photo. B&H will charge the customer a fee equivalent to the duties, tax, and other applicable cross border fees at the time of order. Once you have paid B&H Photo, your merchandise will be delivered to you without interruption.

All orders are imported to Canada as casual goods and are subjected to Provincial Sales Tax (PST). If you are a business or corporation or otherwise exempt from duties/tax, please contact the B&H customer service department to obtain documentation to file a claim for reimbursement.
